

Cyclone FG Range

Fully synthetic food grade compressor oils

Product code: See below

Product Description:

Cyclone FG grades are a range of premium quality, low carbon forming compressor oils suitable for applications where a food grade quality oil is required.

Cyclone FG range of compressor oils contain proprietary patented additives to impart the necessary performance criteria. These include additives to control oxidation, a problem encountered in the high temperature areas of the discharge zones, and anti-wear to protect all the mechanical parts in a compressor. They are blended using carefully selected approved additives to meet the stringent NSF H1 requirements.

Benefits:

- All ingredients are FDA listed
- Fully synthetic
- High viscosity index
- Low temperature performance
- Incorporates the latest corrosion inhibitors for protection against all forms of corrosion
- Highly shear stable for wide operating temperatures
- Good anti foaming and air release properties
- Exceptional anti-wear performance
- High oxidation and thermal stability

Applications:

The Cyclone FG range of compressor oils may be safely used to lubricate air compressors and vacuum pumps used for producing, manufacturing, packing, or processing food. Always comply with the manufacturers drain periods.

Typical Test Data:

Cyclone FG	68	100
Product Code		
Appearance	Clear Colourless	
Kinematic Viscosity @ 40°C (cSt)	68.0	100.0
Operating Temperature Range	-40 to +150°C	

Free From Statement:

The Cyclone FG range does not contain genetically modified ingredients and does not contain any nut oil or derivatives. For a full allergen statement please contact your local representative or our technical department.
